Summary of Services or Products

Since our founding in 1967, ACME Environmental, Inc. has been committed to providing our customers with quality environmental products and services. Originally ACME Products, ACME began as an oil spill containment boom and skimmer manufacturer and was one of the pioneers in this industry. Over the last 56 years, ACME has grown to a full scale environmental company that specializes not only in product manufacturing but also in providing 24/7 emergency oil spill response and cleanup services, impacted soil remediation services, granular activated carbon water treatment, and decontamination services. ACME Environmental holds US Coast Guard Oil Spill Removal Organization (OSRO) classification #0010 and has been a certified OSRO since the program's inception following the Oil Pollution Act of 1990. ACME is also one of the founding members of the Spill Control Association of America (SCAA) and continues to serve this organization through holding leadership positions both in the past and currently within the association. ACME Environmental provides products to the United States government through independent contracting as well as through our GSA Schedule #47QSWA21D0062. Due to ACME's longevity in this industry, thanks to our loyal, hardworking employees and safety culture, it has built a nationwide network of spill contractors and manufacturers to help serve our customers no matter where their emergency might be. ACME's current customers include, but aren't limited to, midstream, upstream, downstream oil and gas companies as well as environmental spill contractors and consultants, environmental distributors, farmers in the cranberry industry, marine construction and dredging companies, and refineries.
