Summary of Services or Products

We are passionate about helping clients develop practical solutions to compliance issues. We have 50+ years of experience in nation-wide environmental regulations, including previous work experience with the ODEQ.

Our experience includes permitting (air, water, waste), multimedia environmental audits, due diligence, emissions testing (including test protocols and test method development), ambient air sampling, regulatory compliance programs, dispersion modeling, and emissions control equipment. We provide NSPS Kb tank inspection services. We also provide NSPS OOOOa leak detection services using our own Optical Gas Imaging (OGI) Camera.

We have had extensive interaction with regulatory agencies regarding permit negotiations, sampling protocol, notice of violations, and compliance plans. We've also conducted training for the U.S. EPA and numerous industrial clients.
