### Summary of Services or Products

Matidor is a project management software for projects where you need to see what's happening live on a map. Environmental consultants, specialists, and project managers who manage their environmental activities across hundreds of locations benefit from Matidor's interactive map interface as the platform uniquely meets the needs of field professionals: geospatial and project information relating to physical locations can be readily seen and understood by both technical and business audiences thanks to its intuitiveness and connectivity.

This one-stop solution gives companies total visibility over their entire operation portfolio on a map, which can be zoomed in at any time for a specific project's site layout, tasks, budgets, expenses, files, and historical activities. Additionally, map layers are easily importable into Matidor.

Rapid access to information improves efficiency, enables better decisions and reduces safety and financial risks. In addition, Matidor's unlimited sharing eliminates the collaboration hurdles between different parties allowing projects to be completed faster and with less headaches.
